Hiring Manager
CorroHealth India

Re: VP RCM Operations — India

CorroHealth's vision of clinically-led, technology-driven revenue cycle management is exactly the intersection where I have spent my entire career. For over 16 years as **Director of Revenue Cycle Operations at Dharma Solutions**, I have not merely managed RCM processes—I have fundamentally re-engineered them by pairing deep clinical workflow understanding with analytics and automation. I currently lead **120+ FTEs** across coding, billing, denial management, A/R follow-up, and quality assurance, overseeing **\$500 million+ in annual revenue** with a **98% client retention rate** that speaks to both operational excellence and strategic partnership. This is not theoretical leadership; this is daily, grind-it-out delivery at scale.

The metrics tell the story of what I bring. I **reduced Days in A/R from 65 to 42** by deploying data-driven payer segmentation, predictive aging analysis, and structured escalation frameworks that replaced guesswork with accountability. I **recovered over \$47 million in denied revenue** by building denial management into a strategic function rather than a tactical afterthought—classifying denial root causes, creating payer-specific appeal playbooks, and measuring intervention ROI at the claim level. At CorroHealth, where analytics-powered RCM delivery is a core differentiator, this kind of measurable, data-backed operational leadership translates directly into competitive advantage for your clients and growth for the business.

But I didn't stop at optimizing human workflows. I **founded and architected Denial Doctor**, a HIPAA-compliant, multi-agent AI platform that automates denial classification, appeal generation, and payer follow-up through six specialized AI agents working in concert. The platform has achieved a **320% ROI and \$12 million in annualized savings**, proving that AI in RCM is not a slide-deck promise—it is a production-grade, revenue-recovering reality. For CorroHealth, which is investing in technology-led transformation of the revenue cycle, having a VP who has both built AI RCM tools and operated large-scale RCM delivery means you get someone who can separate real AI capability from hype and deploy it where it actually moves the needle.

Scaling RCM operations from hundreds to thousands of FTEs is a challenge I understand intimately. It requires building robust training academies, implementing real-time performance management systems, creating career pathways that reduce attrition, and establishing quality governance that holds at every tier. I have done this while maintaining the operational discipline that large health systems and payers demand. My MBA background complements my engineering foundation, enabling me to speak the language of both C-suite stakeholders and the floor-level teams executing the work. At CorroHealth India, I am prepared to lead delivery teams with the same intensity, precision, and commitment to technology-enabled excellence that has defined my career.

I would value the opportunity to explore how my operational leadership and AI RCM expertise can accelerate CorroHealth's mission. You can learn more about my journey at rajeshkantubhukta.github.io. I look forward to connecting.

Rajesh Kantubhukta
