Re: Executive Director of Operations, AI Healthcare Startup

Your job description says it plainly: this is not a support role—it's the role that ensures the company actually runs. That's exactly the kind of position where I thrive, because I've spent my career building operational infrastructure from the ground up while simultaneously creating the technology to make it scale. As **Director of Revenue Cycle Operations at Dharma Solutions for 16+ years**, I didn't inherit a well-oiled machine—I built the machine. I grew and now manage **120+ FTEs** across billing, coding, denial management, A/R, and quality assurance, overseeing **\$500 million+ in annual revenue** with a **98% client retention rate**. Every process, every escalation path, every performance metric in that operation exists because I designed it, deployed it, and refined it under real-world pressure.

Startups don't need people who can maintain systems. They need people who can create them from nothing, adapt them daily, and hold them together with duct tape and determination until the duct tape becomes architecture. I **reduced Days in A/R from 65 to 42** and **recovered over \$47 million in denied revenue** not by following playbooks, but by writing new ones while the game was still being played. When our denial volume spiked, I didn't hire my way out of it—I built the technology to solve it. That's the operator's instinct a startup like FreeHealth.ai needs: someone who sees a broken process and fixes it before the board meeting where it gets reported as a problem.

That instinct led me to **found and architect Denial Doctor**, a HIPAA-compliant, multi-agent AI platform for healthcare revenue cycle automation. Six AI agents working in concert handle denial classification, appeal generation, payer follow-up, and predictive analytics, delivering a **320% ROI and \$12 million in annualized savings**. I built this as a solo architect, integrated it with real healthcare data systems, and proved it in production with real claims and real revenue on the line. I understand what it takes to ship an AI healthcare product: the compliance rigor, the data pipeline complexity, the edge cases that kill demos, and the operational discipline that turns a prototype into something customers actually pay for. At FreeHealth.ai, I bring that full-stack startup capability—operations leadership, AI product architecture, and the grit to do both simultaneously.

Running operations at an AI healthcare startup means building the scaffolding that lets the product team move fast without the company collapsing. It means establishing vendor management, compliance workflows, hiring pipelines, customer onboarding processes, and financial controls—all while the product is still evolving and the market is still being defined. My MBA gives me the strategic framework; my B.Tech in Mechanical Engineering gives me the systems-thinking discipline; my 16 years of operational leadership give me the scar tissue. I know what "building from zero" looks like because I've done it, and I know that at a startup, the Executive Director of Operations doesn't just keep the lights on—they wire the building.

I'd love to discuss how I can help FreeHealth.ai build the operational backbone that turns ambitious AI vision into a company that runs, scales, and delivers. More about my story at rajeshkantubhukta.github.io. Let's talk.

Rajesh Kantubhukta

Director of Revenue Cycle Operations | Founder, Denial Doctor
