Hiring Manager
Genesis Orthopedics & Sports Medicine

Re: Director of Revenue Cycle — India Remote

Orthopedic and specialty practices don't fail because of bad medicine—they leak revenue through fractured denial workflows, under-coded surgical procedures, and payer friction that generic RCM teams simply aren't equipped to navigate. Over the past 16 years as **Director of Revenue Cycle Operations at Dharma Solutions**, I have built and led RCM operations specifically tailored to specialty care, managing **120+ FTEs across end-to-end billing, coding, denial management, and collections** for practices that handle complex procedure codes, prior authorization gauntlets, and high-dollar surgical claims on a daily basis. I understand the orthopedic revenue cycle from pre-authorization through final payment—not as an abstract workflow, but as a system where every denied claim is a patient outcome delayed and a practice dollar lost.

My track record is built on measurable transformation. I **reduced Days in A/R from 65 to 42** by restructuring denial root-cause analysis and implementing payer-specific escalation protocols, and I **recovered over \$47 million in denied revenue** across multi-specialty clients by combining disciplined team management with data-driven intervention strategies. Orthopedic claims in particular demand precision in CPT/HCPCS coding for joint replacements, spine procedures, and sports medicine repairs—areas where even minor documentation gaps invite payer pushback. My teams have been trained to close those gaps upstream, not chase them downstream. We maintained a **98% client retention rate** over 16 years precisely because we treated specialty-specific denial patterns as strategic problems, not operational noise.

What sets me apart from a traditional RCM director is that I didn't stop at process improvement—I built the technology to automate it. I am the **Founder and Chief Architect of Denial Doctor**, a HIPAA-compliant, multi-agent AI platform purpose-built for denial management and revenue recovery. It deploys six specialized AI agents that handle denial classification, appeal drafting, payer follow-up orchestration, and predictive denial scoring, and it has delivered a **320% ROI with \$12 million in annualized savings** for its users. For an orthopedic practice, this means denial patterns unique to high-cost surgical claims—medical necessity disputes, out-of-network authorization failures, bilateral procedure downcodes—can be intercepted and appealed at machine speed, not human bottleneck speed.

Leading an offshore RCM team for a U.S. orthopedic group requires more than language compatibility and time-zone overlap. It demands operational rigor, real-time performance dashboards, and a culture where every team member understands the clinical context behind the claim. I have spent 16 years building exactly that culture, scaling teams that handle **over \$500 million in annual revenue** with accountability structures that ensure quality never degrades at scale. I am confident that my combination of specialty RCM depth, AI automation capability, and proven offshore leadership makes me the right person to drive revenue integrity at Genesis Orthopedics.

I would welcome the opportunity to discuss how my experience and technology can contribute to Genesis Orthopedics' financial health. For more about my journey building RCM operations and AI

solutions from the ground up, please visit rajeshkantubhukta.github.io. I look forward to the conversation.
