Re: VP Managed Services Revenue Cycle Operations

Managed services delivery in healthcare revenue cycle demands a fundamentally different leadership model than in-house RCM operations. It requires the discipline of a consultant—structured assessments, stakeholder alignment, change management rigor, and measurable performance guarantees—combined with the operational depth of someone who has actually run the processes being outsourced. For 16 years as **Director of Revenue Cycle Operations at Dharma Solutions**, I have operated at exactly this intersection, managing **120+ FTEs** across billing, coding, denial management, collections, and QA for external healthcare clients under service-level commitments. I oversee **\$500 million+ in annual revenue** with a **98% client retention rate**—a figure that, in the managed services context, is the single most honest measure of delivery quality and client trust.

Operational performance optimization is not an abstract consulting framework for me; it is what I do every day. I **reduced Days in A/R from 65 to 42** by deploying diagnostic assessments of existing workflows, identifying the highest-impact intervention points, and implementing structured changes with measurable milestones—the same methodology that Huron applies in its managed services engagements. I **recovered over \$47 million in denied revenue** by approaching denial management as a systemic problem requiring root-cause elimination, not tactical firefighting. In a managed services model, where clients are paying for transformational outcomes rather than headcount, this kind of evidence-based, results-driven delivery is what separates a trusted partner from a vendor.

Change management is where most RCM outsourced transitions fail, and it is where I have consistently succeeded. Transitioning a health system's revenue cycle to a managed services model means managing the human resistance, the process discontinuities, and the performance dips that inevitably accompany transformation. I have led multiple client onboarding and transition engagements, building playbooks that include knowledge transfer protocols, parallel-run periods with defined success criteria, and escalation frameworks that ensure client confidence is maintained throughout the transition. My ability to speak the language of C-suite executives—framing RCM performance in terms of margin impact, cash flow acceleration, and risk mitigation—while simultaneously commanding the respect of operational teams executing the work is a direct result of my MBA training and 16 years of senior leadership experience.

What differentiates my candidacy further is the technology lens I bring to managed services. As the **Founder and Chief Architect of Denial Doctor**, a HIPAA-compliant, multi-agent AI platform delivering **320% ROI and \$12 million in annualized savings**, I can infuse Huron's managed services delivery with intelligent automation that drives down cost-to-collect while improving outcomes. Healthcare BPO is evolving from labor arbitrage to technology arbitrage, and I am positioned at the leading edge of that evolution. At Huron, I would bring both the consulting discipline and the technology vision needed to elevate managed services RCM from a cost center to a strategic value driver.

I would value the opportunity to explore how my managed services delivery experience and AI capabilities align with Huron's vision for RCM transformation. More about my professional journey is available at rajeshkantubhukta.github.io. I look forward to the discussion.
