Hiring Manager
RethinkFirst

Re: Director of RCM Operations — Remote

Your job description specifically calls out offshore team management as a core requirement, and that is precisely where my deepest operational strength lies. For 16 years as **Director of Revenue Cycle Operations at Dharma Solutions**, I have built, scaled, and managed offshore RCM teams based in India that serve U.S. healthcare clients with full accountability for billing, collections, coding, denial management, and quality assurance. I currently lead **120+ FTEs** across these functions, overseeing **\$500 million+ in annual revenue** while maintaining a **98% client retention rate**—a number that proves offshore delivery can match or exceed onshore quality when the operational architecture is right. I don't manage offshore teams as a cost play; I manage them as a capability advantage, and that distinction matters.

Offshore RCM leadership at the director level demands more than time-zone management and daily standups. It requires building training systems that get new hires productive in weeks, not months. It requires establishing quality gates that catch errors before they reach the client, not after. It requires creating accountability frameworks where performance is measured in clean claim rates, first-pass resolution percentages, and A/R aging metrics—not activity logs. I **reduced Days in A/R from 65 to 42** by restructuring how my offshore teams prioritize, escalate, and resolve aged claims, and I **recovered over \$47 million in denied revenue** by embedding denial root-cause analysis into the daily workflow rather than treating it as a monthly reporting exercise. These results came from disciplined offshore team management, not from adding headcount.

I also bring deep adaptability across specialty revenue cycles. While my core experience spans multi-specialty RCM, the operational principles that drive billing accuracy and collections excellence are transferable across practice types—whether the specialty is behavioral health, orthopedics, urology, or primary care. Each specialty has its own denial patterns, payer nuances, and coding complexity, but the engine underneath—clean claim submission, timely follow-up, structured denial appeals, and rigorous QA—is universal. I've proven this by achieving consistent results across diverse client portfolios, and I am confident that the same operational discipline will translate effectively to RethinkFirst's behavioral health and ABA therapy focus.

Additionally, I bring an AI automation capability that can accelerate RethinkFirst's operational maturity. I **founded Denial Doctor**, a HIPAA-compliant, multi-agent AI platform that automates denial classification, appeal generation, and payer follow-up, delivering a **320% ROI and \$12 million in annualized savings**. For a growing company like RethinkFirst, embedding AI into the RCM workflow—especially for repetitive denial and follow-up tasks—can amplify the productivity of every offshore team member and reduce the time-to-resolution on claims that would otherwise age out. I don't view AI and offshore teams as competing models; I view them as force multipliers for each other.

I would welcome the chance to discuss how my offshore leadership experience and AI capabilities can strengthen RethinkFirst's RCM operations. You can find more about my journey at rajeshkantubhukta.github.io. I look forward to connecting.
