Hiring Manager
U.S. Urology Partners

Re: VP Revenue Cycle Management — Remote, H1B Sponsor

Specialty practices like U.S. Urology Partners face a revenue cycle challenge that is fundamentally different from general healthcare: higher claim values, more complex procedure coding, tighter payer scrutiny on medical necessity, and a patient population where prior authorization delays can have direct clinical consequences. For 16 years as **Director of Revenue Cycle Operations at Dharma Solutions**, I have operated at precisely this intersection of specialty care complexity and revenue integrity, managing **120+ FTEs** across end-to-end RCM functions and overseeing **\$500 million+ in annual revenue**. I am applying for this VP role because specialty RCM is not just my professional expertise—it is the arena where I have produced my most significant results, and I am ready to bring that impact to the urology space at the vice-presidential level.

Strategic payer relationships are the backbone of specialty revenue optimization, and I have spent years building and negotiating them. I **recovered over \$47 million in denied revenue** by developing payer-specific appeal strategies, challenging inappropriate downcodes, and establishing escalation pathways that get claims re-examined at the right level of authority within payer organizations. I **reduced Days in A/R from 65 to 42** through a combination of payer segmentation, predictive aging analytics, and structured follow-up cadences that ensure high-value specialty claims don't languish in payer queues. Urology claims—from advanced surgical procedures to ongoing cancer treatment authorizations—demand exactly this kind of strategic, high-touch payer management, and my track record proves I deliver it at scale.

At the VP level, the mandate expands beyond operational execution to organizational design, technology strategy, and board-level reporting. I bring a **98% client retention rate** not because my teams never encounter problems, but because I build organizations that anticipate problems before they become client-facing crises. My MBA training gives me the financial modeling and strategic planning capability to frame RCM performance in terms that resonate with executive leadership and equity partners. My engineering background gives me the systems-thinking discipline to design scalable processes rather than heroic workarounds. Together, these competencies enable me to function as a true VP—someone who sets strategy, builds the team to execute it, and owns the outcomes at the highest level.

Regarding the H1B sponsorship: I am based in India and fully open to H1B sponsorship, understanding the commitment and timeline it entails. I have operated remote RCM leadership for U.S.-based organizations throughout my career, with proven systems for time-zone alignment, real-time communication, and in-person presence when strategic meetings or payer negotiations require it. I also bring an AI advantage—as the **Founder and Chief Architect of Denial Doctor**, a multi-agent AI platform delivering **320% ROI and \$12 million in annualized savings**, I can introduce intelligent automation into U.S. Urology Partners' denial and follow-up workflows, amplifying team productivity and accelerating revenue recovery beyond what headcount alone can achieve.

I would appreciate the opportunity to discuss how my specialty RCM leadership, AI capability, and willingness to relocate under H1B sponsorship align with U.S. Urology Partners' strategic goals. For a deeper look at my background and vision, visit rajeshkantubhukta.github.io. I look forward to the conversation.
